## DESIGN A SPACE SUIT

A space suit is much more than a set of clothes for yeti-nauts to wear in space, they protect them from radiation from the Sun and keep them safe by keeping them at the right temperature and helping them breath.

Space suits for people astronauts work in much the same way, can you design one for your very own space mission? What amazing extra features might it have?

Make sure to label your diagram or get your grown-up to help you.
